BINTECH

MODERN IT SOLUTIONS

BINTECH

Industry experience in implementing software development projects

Public and quasi-public sector

Banks and insurance

Transport logistics

The oil industry

We specialize in building solutions

BINTECH

Mobile applications
Development of native applications for Android and iOS platforms and cross-platform Flutter and React Native

Web service portals
Development of service portals for user interaction based on HTML5, JS (React, Angular, Vue)

Accounting systems and databases
Development of accounting systems and databases to ensure the required level of completeness and transparency of accounting

Business processes
Partial or full automation of business processes using low-code/no-code and BPM engines

Data Analysis
Forming answers to business questions from data using Data Science and Data Mining methods

Back-end services and APIs
Development of scalable and high-performance back-end services - server computing

Internet of Things (IOT)
Data collection and interaction with connected devices in real time

Data Integration (ETL)
Data extraction, transformation, purification, enrichment and loading.

Formation of master data.

Robotic Process Automation (RPA)
Automation of routine with software works aimed at speeding up employee operations

DevOps Cloud Maintenance
Deployment and maintenance of an enterprise cloud based on OpenStack, Kubernetes, and GitLab. We manage the infrastructure and servers

Structuring the project
Development based on the idea – concept of the product, the formation of a technical specification and an investment project

Development Management
Decomposition of work to atomic tasks, risk minimization, compliance with procedures and control of execution.

(SCRUM)

Business analysis and reengineering
The study of processes "as is", optimization or reengineering (to be). Development of detailed task statement

Quality control
Conducting software tests on functionality and load profile to ensure quality.

Cybersecurity
In practice, it is possible to ensure the security of systems from unauthorized access through testing (pentest, bug bounty) and monitoring (SOC)

BINTECH

Our priority is to ensure the high quality of the final product. We work through every stage of development, from analyzing customer requirements to testing and implementation.

Structuring

The process of defining tasks, organizing them into a logical sequence and allocating resources to effectively achieve goals

Management

A systematic approach to achieving goals, including planning, resource allocation and effective communication

Support

Continuous product maintenance process for reliable operation, updates and user support

How are we organized inside

Customer

| The base of qualified resources: skills, experience, interests, accessibility | Project management and quality control of work execution | Structuring projects for the possibility of successful implementation | Maintenance and technical support of systems |

Mobile teams

Front-end teams

Back-end teams

integration teams

Databases

DevOps teams

Cyber Security

* The competency domains are provided for illustration purposes

The technology stack that we use

Web & Mobile
We develop websites as well as comprehensive business applications

- React
- Angular
- Vue
- Webpack
- Babel

- Java
- Kotlin
- Swift
- Objective C
- Firebase

Highload Backend
Backend development of any level of complexity by experienced experts

- Spring Boot
- JHipster
- AKKA
- Golang
- NodeJS
- K8S
- Docker

- Flask
- RabbitMQ
- Kafka
- PostgreSQL
- MongoDB
- Elasticsearch

SUSE

BInTech in partnership with SUSE

the largest Open Source company in the world

Our partnership with SUSE allows us to provide customers with reliable and innovative technologies optimized for their business needs
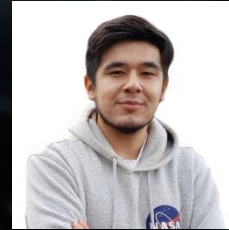

How the work process is organized

The customer sends a request for proposal for software development

1

BInTech interviews process owners and prepares a solution concept

2

Customer agrees concept solutions

3

BInTech structures the work, cost and implementation schedule

4

The customer agrees on the project structure, timing and cost

5

Signing of the final acts

10

Execution of development tasks, acceptance, activation and payment

9

Detailing development tasks for a week / month /quarter

8

Signing of an outsourcing agreement between BInTech and the Customer

7

The customer establishes or adjusts the budget and procurement plan

6

BInTech Leaders
